PRODUCT DATA SHEET

ISOL NT

ISOL NT- Electrolyte used with the ISOJET 3 Cleaner #3 System.

The Isojet Cleaner #3 system removes the discoloration from the weld and heat affected zone of 300 series stainless steel through an electrochemical process.

ISOL NT is an electrolyte developed to be used with our ISOL JET #3 Cleaner Unit. It is a stronger solution than our standard solution; ISOL N. The ISOL NT will remove heavier oxides from stainless steel welds. The ISOL NT is not for bright/mirror finishes.

ELECTROLYTE: An ionic conductor, a liquid, most often a solution that will conduct an electric current.
